

B1
Cont

a cable operated winding mechanism disposed in said outer casing, said cable operated winding mechanism having a cable attachment point disposed relative to said access opening to be accessible from said access opening; and

A1
Cont

a maintenance cover movably coupled to said outer casing between a closed position overlying said access opening and an open position exposing said access opening, said maintenance cover being slideably coupled to said outer casing between said closed position and said open position.

Please replace claim 12 with the following **once** amended version:

A2

12. (Amended) A bicycle shift control device comprising:
an outer casing having a cable receiving bore and an access opening;
a cable operated winding mechanism disposed in said outer casing, said cable operated winding mechanism having a cable attachment point disposed relative to said access opening to be accessible from said access opening; and
a maintenance cover movably coupled to said outer casing between a closed position overlying said access opening and an open position exposing said access opening, said maintenance cover including a plurality of ribs that form a handle element arranged to aid in moving said maintenance cover between said closed position and said open position.
